ABOUT

With over nine years of experience as a Sales Representative, I bring a unique blend of customer service expertise, problem-solving skills, and a keen eye for detail to the table. During my tenure as a sales, I developed a strong foundation in problem-solving and attention to detail, ensuring customer satisfaction through effective communication and understanding of product specifications. This background has equipped me with the soft skills necessary for success in the tech industry, particularly in roles requiring close interaction with users and clients. While studying in college, I have completed several personal projects that showcase my growing proficiency in web development. These projects, along with my natural adaptability and enthusiasm for learning, position me well for a transition into a professional role in web development. I am eager to leverage my unique combination of soft skills, technical skills, and personal qualities to contribute to innovative web solutions. I am excited about the opportunity to apply my problem-solving abilities and customer-centric mindset to create engaging and user-friendly digital experiences.

PROJECTS

Frontend Developer

October 2023 – March 2024

Project:Nishiki

Vancouver, Canada

This is a group volunteer project to create food management web application which remember what a user has in their refrigerator or it can be used as a imaginary container that share the food/drinks among a group, to avoid duplication.

- Frontend Development: Utilized Next.js/typescript and tailwindCSS to build the frontend components
- Design Collaboration: worked closely with designers to UI/UX designs, focusing on creating intuitive and visually appealing experience
- Testing and Debugging: Conducted testing for ensuring a smooth user experience

Used Technologies: TypeScript, React, Next.js, tailwindCSS, shadcn/ui, zod, jest

Developer

March 2024 – April 2024

Project:line-bot

Vancouver, Canada

This is a personal project, shopping memo, utilizing communication app LINE which is one of the most famous communication tool in my home country. it has web hook feature to get,add and delete data from database.

- CRUD operation: Utilized web hook feature from LINE web API and implemented communication with database.
- Cloud Database: set database in supabase and and utilize its edge function to implement the application.

Used Technologies: TypeScript, supabase, Deno
